

Controller

```
classDiagram
    class Controller
    class TwitterController["Area.Controllers.TwitterController"]
    TwitterController --|> Controller
```

The diagram shows a class hierarchy. At the top is a class named 'Controller' with three empty compartments. Below it is a class named 'Area.Controllers.TwitterController' with three compartments. The first compartment contains the class name, the second is empty, and the third contains two methods: '+ TwitterAuth()' and '+ TwitterCallback()'. A blue arrow with an open triangle head points from the 'Area.Controllers.TwitterController' class to the 'Controller' class, indicating inheritance.

Area.Controllers.Twitter  
Controller

+ TwitterAuth()  
+ TwitterCallback()
